

LCD PROJECTION HDTV

V28L CHASSIS

**WD-52526**

## V28L Chassis

**WD-52526**

**WD-62526**

### CAUTION:

Before servicing this chassis, it is important that the service person read the "SAFETY PRECAUTIONS" and "PRODUCT SAFETY NOTICE" contained in this manual.

## SPECIFICATIONS

**SCHEMATIC DIAGRAMS .....**

## **INTRODUCTION**

This service manual provides service instructions for LCD Projection TV Models WD-52526 and WD-62526, using chassis V28L.

This service manual includes:

1. Assembly and disassembly instructions for the front and rear cabinet components.
2. Servicing of the Lenticular Screen and Fresnel Lens.
3. Servicing down to major components, chassis, PWBs, Light Engine, Lamp Ballast, etc..
4. Adjustments.
5. Lead Free Soldering.
6. Chip parts replacement procedures.
7. Simplified circuit path diagrams.

The parts list section of this service manual includes:

1. Cabinet and screen parts.
2. Electrical parts.

Block diagrams of the above listed models are included in this service manual for better understanding of the circuitry.

## **PRODUCT SAFETY NOTICE**

Many electrical and mechanical parts in television receivers have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have special safety characteristics are identified in this service manual.

Electrical components having such features are identified by shading on the schematic diagram and by bold type in the parts list of this service manual. **Therefore, the replacement for any safety part should be identical in value and characteristics.**

***Solder***

The PWBs used in the V28L chassis are constructed using Lead-Free solder. **When servicing use only recommended Lead-Free solder (refer to page 36).**

## SAFETY PRECAUTIONS

**NOTICE:** Observe all cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.

**WARNING:**

1. Operation of this receiver outside the cabinet or with the cover removed presents a shock hazard from the receiver's power supplies. Work on the receiver should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment.
2. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage area. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

**WARNING ... RISK OF EYE INJURY**

**Do not look into the light source, lens or mirror when operating the TV**

### Leakage current check

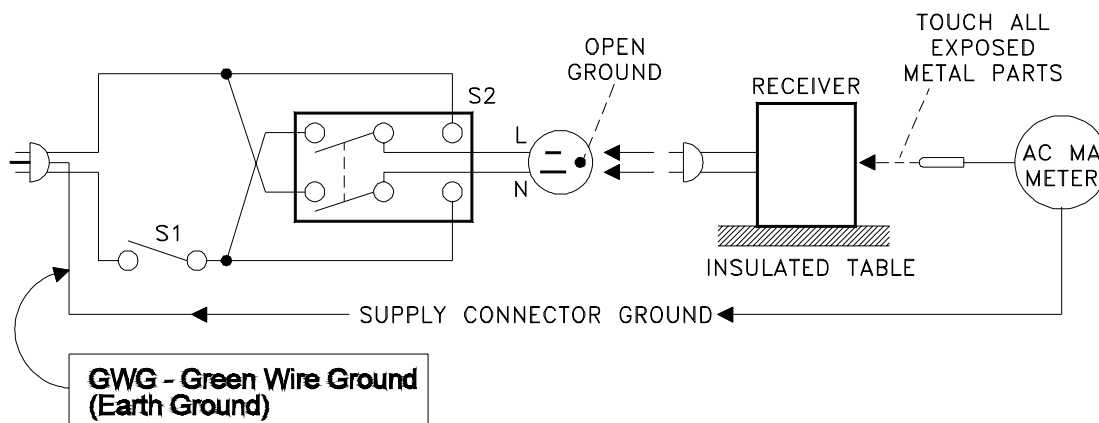

Before returning the receiver to the customer, it is recommended that leakage current be measured according to the following methods.

#### 1. Cold Check

With the alternating current (AC) plug removed from the AC source, place a jumper across the two AC plug prongs. Connect one lead of an ohm meter to the AC plug and touch the other lead to each exposed metal part (i.e. antennas, handle bracket, metal cabinet, screw heads, metal overlay, control shafts, etc.), particularly any exposed metal part that has a return path to the chassis. The resistance of the exposed metal parts having a return path to the chassis **should be a minimum of 1Meg Ohm**. Any resistance below this value indicates an abnormal condition and requires corrective action.

#### 2. Hot Check ...Use the circuit shown below to perform the hot check test.

1. Keep switch S1 open and connect the receiver to the measuring circuit. Immediately after connection, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2.
2. Close switch S1, energizing the receiver. Immediately after closing switch S1, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2. Repeat the current measurements of items 1 and 2 after the receiver has reached thermal stabilization. **The leakage current must not exceed 0.5 milliampere (mA).**

## **CABINET FRONT DISASSEMBLY**

### **SPEAKER GRILLE Removal**

Pull the SPEAKER-GRILLE away from the cabinet to remove.

### **SCREEN-ASSY Removal**

- 1) Remove 10 screws (a) from the upper cabinet rear cover (3 screws on each side and 4 screws across the top).
- 2) Remove screws (b) along the bottom of the SCREEN-ASSY (8 screws on 52 inch models, and 12 screws on 62 inch models),
- 3) Unplug the LL connector to the front CONTROL-PANEL.
- 4) Lift the SCREEN-ASSY up slightly and then pull away from the cabinet.

## **CHASSIS REMOVAL**

### **BACK-COVER Removal**

- 1) Remove 9 screws (a)
- 2) Remove 13 screws (b)
- 3) Pull the COVER-BACK from the cabinet.

### **Metal Support Plate Removal**

Remove 4 screws (a) to remove the metal support plate,

## Chassis Mounting Screws Removal

Remove the two chassis mounting screws (b).

## Release Cable Clamps & Disconnect CE Connector

Cable  
Clamp

CE  
Connector

Cable  
Clamp

Cable  
Clamp

**On the right side of the chassis (from the rear):**

- 1) Release the AC Cord from it's mounting.
- 2) Unplug ES1 connector to the speakers.

**AC Cord**

**ES1 Connector**

**Chassis removal from the Cabinet**

Carefully rotate the chassis clockwise to slide it from the cabinet.

## Complete Chassis Removal

To completely remove the chassis from the cabinet, the following connectors must be unplugged.

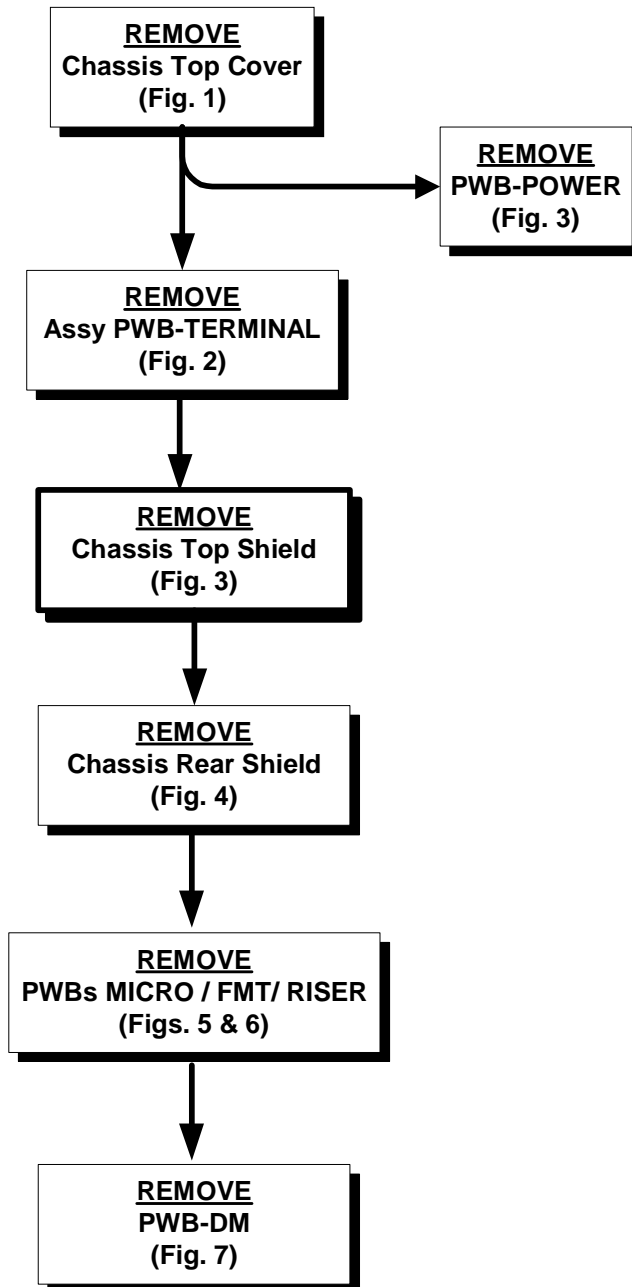

- PL plug to the Ballast (on the left side of the chassis).
- KA plug from the PWB-RISER (right side of chassis).
- FB, FC and J8F01 at the PWB-FORMAT (right side of chassis).

## Chassis Disassembly / Accessing PWBs

Note: Although not individually indicated, unplug the required connectors in each disassembly step.

### Chassis Sequence of Disassembly

### Chassis Cover Removal (Figure 1)

- 1) Remove the 4 screws (a).
- 2) Lift the Cover from the chassis.

Figure 1: Chassis Cover Removal

### Assy PWB- TERMINAL Removal (Figure 2)

- 1) Remove 7 screws (a) to remove the TERMINAL-INLAY.
- 2) Remove 3 screws (b) to remove the Assy PWB-TERMINAL.

Figure 2: ASSY PWB-TERMINAL Removal

**PWB-POWER Removal (Figure 3)**

- 1) Remove four screws (b).
- 2) Disconnect all connectors to PWB-POWER.
- 3) Lift PWB-POWER from the chassis.

**Chassis Upper Shield Removal (Figure 3)**

- 1) Remove seven screws (c).
- 2) Lift the Shield from the chassis.

**Figure 3: PWB-POWER and Chassis Upper Shield**

**Chassis Rear Shield Removal (Figure 4)**

- 1) Remove seven screws (c).
- 2) Remove nut (c1).
- 3) Pull off Chassis Rear Shield.

**Figure 4: Chassis Rear Shield Removal****PWB-MICRO Removal**Referring to **Figure 5**.

- 1) Remove three screws (d).
- 2) Unplug PWB-MICRO from PWB-RISER and remove from the chassis.

**Figure 5: PWB-MICRO Mounting Screws**

## PWB-RISER and PWB-FORMAT Removal

Referring to *Figure 6*.

- 1) Remove one screw (e).
- 2) Unplug and remove PWBs RISER and FORMAT.

**Figure 6: PWBs RISER and FORMAT Removal**

## PWB-DM Removal (*Figure 7*)

- 1) Remove three screws (g) holding the PWB-MICRO Support Bracket.
- 2) Remove the Support Bracket.
- 3) Remove the five screws (h).
- 4) Remove the PWB-DM from the chassis.

**Figure 7: PWB-DM Removal**

## Light Engine Replacement

### Light Engine and Associated Components

The exploded view below shows the the Light Engine and those components attached directly to the Engine. When replacing the Light Engine, these components must be removed from the original Light Engine.

## Light Engine Replacement

### **Preliminary**

Refer to the chassis removal procedure and remove the BACK-COVER and Metal Support Plate (page 8)

### **Light Engine Removal Procedure**

The following steps describe how to remove the Light Engine from the cabinet and those parts that are not included in a replacement Engine

- 1) Remove (3)\* screws (a) from Filter Cover Holder

### Light Engine (Rear View)

- 2) Remove fixing screws (1) & (2) to remove the SLIDE-LOCK-MATE

- 3a) Loosen [A-1] & [A-2] so that they do not touch [A-3]. (4MM Allen wrench)
- 3b) Loosen lock nuts (1) and (2). (8MM open end wrench)
- 3c) Turn [A-3] CCW so the [A-3] bolt clears the Engine Plate. (5MM Allen wrench)

## Light Engine Replacement

- 4) Remove one screw (b) securing engine plate and base

- 5) Remove two screws (c) from Fan Plate and remove Fan Plate

- 6) Disconnect all connectors

- 7) Remove DVI cable and (2) connectors

- 8) Remove wiring from three wiring clamps (d).

- 9) Remove 4 screws (f) from the Lamp Fan.

10) Remove (4) screws (g) from Lamp Fan Bracket

11 Loosen (2) screws (h) to remove Ballast Cable

12) Disconnect all connectors from Interface PWB and remove (2) screws (k) from Bracket

13) Remove (4) screws (n) from Intake Cover

14) Remove four screws (a), (b), (c) and (d) to separate Light Engine from Engine plate

Screw (c)

Screw (d)

15) Lift the Engine from Engine plate leaving the Lamp Duct fan, Lamp Duct Intake and Ballast.

## **INSTALLATION**

- 1) Reverse the above steps.
- 2) Copy White Balance Data to PWB-FMT (refer to page 29).
- 3) Refer to the Adjustment Section and perform Trapezoidal Distortion, Rotation and Position adjustments as necessary.

## **SERVICING THE LENTICULAR SCREEN AND FRESNEL LENS**

**CAUTION:** **Wear gloves** when handling the Lenticular Screen and Fresnel Lens.  
This prevents cuts and finger prints. **Do not place Fresnel Lens in the sun.**  
This may cause fire and heat related injuries.

### **Lenticular Screen and Fresnel Lens Removal**

1. Remove the screen assembly as shown in the Cabinet Disassembly procedure.
2. Remove the four screws (a) to remove the bottom of the SCREEN-FRAME-BOTTOM . (Figure 1)
3. From the front of the screen assembly, slide the BEZEL out the bottom of the Screen Frame. (Figure 2)
4. From the rear of the screen assembly, carefully slide the Lenticular Screen and Fresnel Lens combination from the Screen Frame. (Figure 3)

**Note:** When separating the Lenticular Screen from the Fresnel Lens, use caution while prying the Screen and Lens apart. Use a slot type screw driver, and remove the pressure sensitive double sided tape.

Figure 1: SCREEN-FRAME-BOTTOM Removal (Rear View)

*Figure 2: BEZEL Removal (Front View)*

*Figure 3: Lenticular Screen & Fresnel Lens Removal (Rear View)*

## **SERVICING THE LENTICULAR SCREEN AND FRESNEL LENS**

### **Lenticular Screen and Fresnel Lens Installation**

**Note:** Store the Lenticular Screen and Fresnel Lens in a cool dry place. High humidity may deform the Lenticular Screen and Fresnel Lens.

1. Apply double coated tape (Part #LENS-TAPE) along the top rear edge of the Lenticular Screen, as shown below. Refer to the table below for the tape length.
2. Sandwich the Fresnel Lens and Lenticular Screen together. The Lenticular Screen label must be towards the front and the Fresnel Lens label towards the rear. (*Figure 4*)
3. Apply pressure at the top edge to bond the screens together.
4. Reverse the Screen Removal procedure and insert the screens in the Screen Fame Assembly.

\*X INCHES – REFER TO TAPE LENGTH IN THE TABLE BELOW

*Figure 4: Installing the Fresnel Lens & Lenticular Screen*

\*X INCHES - refer to the Tape Length in the table below

MODEL	SCREEN SIZE	TAPE LENGTH
WS-52526	55 inch	46.3 inches
WS-62526	65 inch	55.1 inches

## OPTION MENU

1. Press the "MENU" button on the remote hand unit.
2. Press the buttons "2", "4", "7" and "0" in order.  
(The screen will change to the option menu.)

MENU-2-4-7-0

TV Level Sound	On	On	On	On

### A. A/V Memory

Each of the external inputs has its' own Audio/Video Memory. A change in an A/V setting at a specific input is stored in memory for that specific input.

### B. A/V Reset

1. The front panel AV Reset (pressing the “Guide” and “Format” buttons at the same time) initializes all A/V Memories.
2. The AV Reset in the user’s menu initializes only the selected input’s A/V Memory.

## LED Indicator Diagnostics

The front panel LEDs provide an indication of the sets operation, and the possible cause of a malfunction. There are three front panel LEDs, “Power”, “Status” and “Lamp”. Which LED is lit, the color and whether it is blinking or steady indicate the current status, or a possible malfunction.

*Front Panel LEDs*

### Normal LED Indications

POWER LED	STATUS LED	LAMP LED	Power Status	Condition
Off	Off	Off	Stby	Off
Green	Off	Off	P-ON	Power On
Off	Off	Blinks Green	After Turn Off	Lamp Fan On for 1 minute
Blinks Green	Off	Off	Stby	Booting after AC applied
Slow Blinks Green	Off	Off	Stby	On Timer is set

**Abnormal LED Indications**

POWER LED	STATUS LED	LAMP LED	Power Status	Condition
Off	Yellow	Off	Low Power	Excess Temperature
Off or On	Off	Yellow	No change	Usage time over 4000 Hrs.
Off	Off	Blinks Yellow	Low Power	Lamp Cover open
Off	Blinks Yellow	Off	"	Filter Cover Open
Off	Off	Red	Stby	Lamp did not turn On
Off	Blinks Red	Off	Low Power	Fan Stopped
Off	Red	Off	"	Circuit failure (short or DVI connector unplugged)

**3. Error Code Operational Check**

**Note:** The TV must be in "Shut Down" and not have been switched Off, to perform the Error Code Operational Check. When the TV is switched Off, the code automatically resets to "12" No Error.

Pressing the front panel "DEVICE" and "MENU" buttons at the same time, and holding for 5 seconds, activates the Error Code Mode. The LED flashes denoting a two digit Error Code, or indicating no problem has occurred since the last Initialization.

**Note:** The front panel buttons must be used, NOT those on the Remote Control.

- The number of flashes indicates the value of the MSD (tens digit) of the Error Code.
  - The flashing then pauses for approximately 1/2 second.
  - The LED then flashes indicating the value of the LSD (ones digit) of the Error Code.
  - The Error Code is repeated a total of 5 times.
- Example: If the Error Code is "23", the LED will flash two times, pause, and then flash three times.

**4. Error Codes**

The Error Code designations indicating malfunction, or no malfunction, are listed below:

Error Codes	Description
12	No error detected
22	Recovery from Reset
32	Lamp cover is Open
33	Air Filter is open
34	Lamp abnormality
35	DM Fan failed
36	Lamp Ballast Fan failed
37	LCD Engine Fan failed
38	Lamp temperature abnormally high
39	LCD temperature abnormally high
41	Short is detected
42	Lamp Fan failed
44	DVI cable between Format and Engine disconnected
45	PBS Fan Failed
46	LCD Temp. Sensor not detected (check DT connector)
47	DM Temperature too high
48	Engine power supply short detected
51	Speaker short detected
56	Shutter not connected

# SERVICE ADJUSTMENTS

There are only 5 Service Adjustments required in these models:

## Two Electrical Adjustments

- Horizontal Centering
- Vertical Centering

## Three Mechanical Adjustment

- Picture Rotation
- Horizontal Keystone Distortion
- Vertical Keystone Distortion

## Measuring equipment and Jigs

- No additional Test Equipment is required.
- Conventional Electrical Hand Tools.

## Test signal

An internally generated Test Signal is used, no additional external signals are required.

## Circuit Adjustment Mode

On these models, the Circuit Adjustment Mode is used only for:

- Test Signal activation
- Horizontal Centering
- Vertical Centering the following adjustments may only be performed using the remote hand unit.

### 1. Activating the adjustment mode

1. Press the "MENU" button on a remote hand unit.  
(The "MENU" display will appear.)
2. Press the buttons "2", "4", "5" and "7" in that order.  
(The screen will change to the adjustment mode.)  
If not changed to the adjustment mode, repeat steps 1 and 2.

### 2. Test Signal Activation

When in the Circuit Adjustment mode, use the "REWIND" and "FAST FORWARD" buttons on the remote control to toggle through the test patterns. These patterns are used for both electrical and mechanical adjustments.

### 3. Adjustment Function Selection

Use the "AUDIO" button to select a specific Adjustment Function.

#### 4. Adjustment Selection

Use the "VIDEO" button to select a specific electrical adjustment, "1 HPOS" or "2 VPOS".

#### 5. Adjusting Data

After selecting an adjustment item, use the "UP" and "DN" buttons to change adjustment data.

- If the "UP" button is pressed, the adjustment data increases.
- If the "DN" button is pressed, the adjustment data decreases.

#### 6. Saving data

Press "ENTER" to save the adjustment data in memory.

The display characters go red for approximately one second in this step.

**Note:** If the circuit adjustment mode is terminated without pressing "ENTER", changes in adjustment data are not saved.

#### 6. Terminating the circuit adjustment mode

Press the "MENU" button on the remote hand unit twice to terminate the adjustment mode.

**Note:** The adjustment mode can be also terminated by turning the power off.

### Transferring Data

- 1) Enter the Service Adjustment Mode ... Press "MENU-2-4-5-7"
- 2) Press "0" when in the Service Mode ... Three choices appear at the top of the screen.
- 3) Use the UP & DN keys to highlight the desired choice, then Press "ENTER"

#### Data Transfer

"MENU-2-4-5-7-0"

Display	Description
Restore Back Up	Resets data to factory values
Upload Terminal Data	Not used
Down load WB data to FMT	Use after replacing Engine PWB-FORMAT

# Light Engine Adjustments

## Test Signal Activation

- 1) Press "MENU-2-4-5-7" (Service Mode)
- 2) Press "REW" (Test Pattern).

Red = 4% overscan  
 White = 5% overscan  
 Green = 6% overscan  
 Cyan = 7% overscan  
 Yellow = 10% overscan

## Preliminary (refer to the diagram below)

- 1) Remove Back Board
- 2) Loosen Fixing Screws (1) and (2) in the Slide Lock Mate
- 3) Loosen Nuts (1) and (2) on the Adjuster
- 4) Loosen [A-1] and [A-2] on the Adjuster

## Light Engine (Rear View)

## Trapezoid Distortion Adjustment

- 1) Loosen [A-1] and [A-2] so they clear [A-3].
- 2) For Distortion at the top of the picture, rotate [A-3] counter clockwise (the picture will move upward).
- 3) For distortion at the bottom of the picture, rotate [A-3] clockwise (the picture will move upward).

## Rotation Adjustment

### Clockwise Rotation Needed

- 1) Loosen [A-2]
- 2) Use [A-1] to adjust rotation.

### Counter Clockwise Rotation Needed.

- 1) Loosen [A-1]
- 4) Use [A-2] to adjust rotation

Loosen [A-1]  
Adjust [A-2]  
Tighten [A-1]

Loosen [A-2]  
Adjust [A-1]  
Tighten [A-2]

## After Adjustment (refer to previous page)

- 1) Tighten Nuts (1) and (2).
- 2) Tighten Slide-Lock-Mate fixing screws (1) and (2).
- 3) Insure [A-1] and [A-2] are flush against [A-3].

**MODEL: WD-52526 / WD-62526**

<b>[Format Circuit]</b>		<b>Purpose:</b> To center the picture on the screen.
<b>Horizont/Vertical Position Adjustment</b>		<b>Symptom:</b> Picture is off center.
<b>Measuring Instrument</b>		<ol style="list-style-type: none"><li>1. Press "MENU-2-4-5-7", activates the Service Mode..</li><li>2. Press "REWIND", activates the Overscan Test Pattern</li><li>3. **OPTICAL ENGINE TROUBLESHOOTING**

Symptom	Cause	What to check
No Light	FMT does not turn on lamp due to fault detection	Check error code on front pannel. Check problem indicated.
	No DC supply to ballast	Check power PWB PL connector for approx. 340VDC. Check connections PL-JE, JE-CN2
	No Lamp enable signal	Check FMT output LAMP-EN at FB pin 4. Check LAMPLIT at FB-pin 1
No Picture, bad picture	FMT does not turn on video	Check diagnostic code. Check circuit indicated.
	DVI cable not connected	check DVI connections
	Engine power missing	Check connections PA2 (PWR) & CN102 on Engine
	Engine is blanked.	Check control connections FC-FC, KC-CN3100.
	FMT not providing video signal	Check FMT Board.
	Engine broken	Replace engine and check.
High Contrast Unit not Working	No power to Shutter	Check 18V from Power board at PB pin4. Check connections PB-PB, KD-CN1
	No control of shutter	Check connections CN5-JG, JG-KD, KD-CN2
	FMT does not control shutter	Replace FMT and check.
	Shutter broken	Replace engine.
Set Shuts down after a while	Fan not working. Temp sensor.	Check error code and check indicated fan or sensor.
	Filter clogged	Check filter and clean or replace.
	Temp sensor problem	Check error code. Check connections DT-KB, LT-KB. Check sensor
	Air path blocked	Check air flow from each engine fan.

**LCD ENGINE INTERNAL LAYOUT**

**LAMP PROTECT LINE**

COVER-DET Status [CD]	LAMP_PROT. Voltage (KA/pin 14)	LED Indicators	Emergency code (Device+Menu)	Comment
Engaged	2.46 V	N/A	N/A	Normal condition
OPEN	1.64 V	Lamp: Yellow, blink.	32	Turns OFF fast (1-2 sec).

**ENGINE PROTECT LINE**

Sensor Status			ENG_PROT. Voltage (FB/pin 9)		LED Indicators	Emergency code (Device+Menu)	Comment
LAMP-TEMP [LT]	FILTER-DET [CF]	SENSOR-DET [DT]	Specified	Measured			
Engaged	Engaged	Engaged	2.88 V ~ 2.68 V	2.82 V	N/A	N/A	Normal condition
Engaged	Engaged	OPEN	2.48 V ~ 2.28 V	2.40 V	Status: Yellow.	46	Turns OFF fast (1-2 sec).
Engaged	OPEN	Engaged	2.08 V ~ 1.88 V	2.00 V	Status: Yellow, blink.	33	Turns OFF fast (1-2 sec).
OPEN	Engaged	Engaged	1.30 V ~ 1.10 V	1.20 V	Status: Yellow.	38	Turns OFF slowly (25-30 sec). Warning on screen.

**FAN DETECT LINE**

Fan Status				FAN_DET Voltage (FB/pin 9)		LED Indicators	Emergency code (Device+Menu)	Comment
PBS [JB]	LAMP [JA]	MD [JC]	BALST [JF]	Specified	Measured			
Drive: 10.04 V Engaged	Drive: 10.04 V Engaged	Drive: 6.01 V Engaged	Drive: 7.02 V Engaged	3.02 V ~ 2.92 V	3.00 V	N/A	N/A	Normal condition
Engaged	Engaged	Engaged	OPEN	2.82 V ~ 2.72 V	2.80 V	Status:	36	Turns OFF fast (1-2 sec).
Engaged	Engaged	OPEN	Engaged	2.62 V ~ 2.52 V	2.60 V	Red, blinking.	37	
Engaged	OPEN	Engaged	Engaged	2.23 V ~ 2.13 V	2.20 V		42	
OPEN	Engaged	Engaged	Engaged	1.44 V ~ 1.34 V	1.40 V		45	

## Using Lead Free Solder

The above symbol indicates Lead (Pb) Free solder was used during the construction of PWBs. **Only Lead Free solder** should be used when servicing these PWBs.

Solder must be compatible with that used by the manufacturer. Leaded solder can not be used on PWBs manufactured with Pb-free solder. The Mitsubishi standard for service requires the use of Tin-Silver-Copper (Sn-96.5, Ag-3.0, Cu-0.5). It can be obtained through the Parts Department.

Order part number: **PB FREE SOLDER**

Lead Free solder has a higher melting point, and does not “wet” as well as leaded solder. This means it does not adhere as readily to the solder iron tip, and the surface to be soldered. To counteract this, the flux used is more corrosive.

The following cautions must be taken when using Pb Free solder.

- Higher temperatures can cause the PWB to warp, detaching surface mount components.
- Higher temperatures may cause thermal damage to components.
- Higher temperatures can cause plastics, such as connectors, relays, LEDs electrolytic capacitors, etc. to melt or warp.
- Higher temperatures can cause surface oxidation resulting in poor solder spread-ability and wet-ability.

- The flux is more corrosive.
- The time required for a good solder connection may take longer.
- Poor wet-ability can cause solder balls.
- Higher temperatures can cause flux spattering.
- Soldering iron tip life is shortened.
- Dull finish solder joints (not shiny) can appear to be a “cold” solder joint.

In general a tip temperature of 700° F will usually provide good results.

### Displays used to indicate Pb-free

PCBs will be marked, indicating the level of Pb-free construction. *Table 1* defines the levels by phase and shows the different symbols that will be displayed on the PCB. Additionally, a PCB constructed using Pb-free solder may be simply marked **LFS**.

When possible, the indication will be placed close to the part number that is screened onto the PCB (not the part label). *Figure 1* is an example of a PCB showing the display and its location.

Pb-Free Phase	Definition	Display	Short Display (When the area is too small)
Phase-1	PCB's constructed using Pb-free solder.		
Phase-2	Solder, PCB surface finishing and component lead plating is Pb-free. Components may have internal Pb.		
Phase-3	Solder, PCB surface finishing and components are Pb-free. (100% Pb-free)		

Table 1: Pb-Free Phases and Symbols

Figure 2: Pb-Free display on PWB

## CHIP PARTS REPLACEMENT

Some resistors, shorting jumpers (0 Ohm resistors), ceramic capacitors, transistors and diodes are chip parts. The following precautions should be taken when replacing these parts.

### Cautions:

1. Use a fine tipped, well insulated soldering iron and tweezers.
2. Melt the solder and remove the chip parts carefully so as not to tear the copper foil from the printed circuit board.
3. Discard removed chips; do not reuse them.
4. Do not apply heat for more than 3 (three) seconds to new chip parts.
5. Avoid using a rubbing stroke when soldering.
6. Take care not to scratch, or damage the chip parts when soldering.
7. Supplementary cementing is not required.

### Chip Parts Removal (Resistors, Capacitors, etc.)

1. Grasp the part with tweezers. Melt the solder at both sides alternately, and remove one side of the part with a twisting motion.
2. Melt the solder at the other side and remove the part.

### Chip Parts Removal (Transistors)

1. Melt the solder of one lead and lift the side of that lead upward.
2. Simultaneously melt the solder of the other two leads and lift the part from the PCB.

### Replacement

1. Presolder the contact points on the circuit pattern.
2. Press the part downward with tweezers and apply the soldering iron as shown.

# REPLACEMENT PARTS

## Parts Ordering

To expedite delivery of replacement parts orders, specify the following:

1. Model Number/Serial Number
2. Part Number and description
3. Quantity

**Note:** Unless complete information is supplied, delay in processing of orders will result.

## Critical and Warranty Parts Designation

**Critical Electrical Components** are indicated by **Bold Type** in the Parts List, and in the schematic diagrams by shading. 

**Warranty Return Parts** are indicated in the Parts List with an (\*).

## Parts Tolerance Codes

Refer to the following chart for tolerance characteristics of electrical components.

MARK	B	C	D	F	G	J	K
Tolerance %	± 0.1	± 0.25	± 0.5	± 1	± 2	± 5	± 10

MARK	M	N	V	X	Z	P	Q
Tolerance %	± 20	± 30	± 10	+ 40 -20	+ 80 -20	+ 100 - 0	+ 30 -10

MARK	M	N	V	X	Z
Tolerance (pF)	± 0.1	± 0.25	± 0.5	± 1	± 2

## QUICK REFERENCE FOR COMMON PARTS
